THE REASONS FOR ALLOWANCE

Applicant's response filed 10/12/06 to the Office action is entered. Claims 1-42 are pending.

1. The following is an examiner's statement of reasons for allowance:

No prior art has been found teaching or suggesting a method of concurrently generating a secondary amplification product and an amplification product in a primer based nucleic acid amplification comprising: hybridizing a signal primer to a target sequence and a first amplification primer to the target sequence upstream of the signal primer, wherein a characteristic of the signal primer is that it may not function as an amplification primer; extending the hybridized signal primer on the target sequence to produce a signal primer extension product and extending the hybridized first amplification primer on the target sequence such that the extension of the first amplification primer displaces the signal primer extension product from the target sequence; hybridizing a second amplification primer to the signal primer extension product and extending the hybridized second amplification primer on the signal primer extension product to produce a second amplification product comprising a newly synthesized strand; displace the newly synthesized strand from the signal primer extension product and hybridizing the signal primer to the displaced newly synthesized strand and extending the signal primer in which a double stranded secondary amplification product is generated.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
